

Enemeez® Regular 283mg Docusate Sodium Mini Enema

Enemeez® Regular 283mg Docusate Sodium Mini Enema, Constipation Relief, 30 Count Jar

Constipation is the most common gastrointestinal complaint in primary, acute, and long-term care settings in the United States. An estimated 42 million individuals in the United States have bowel issues or constipation. And an estimated 1 million have incontinence. For people with conditions that can require a bowel care program, such as spinal cord injury, Spina Bifida, Multiple Sclerosis, and Traumatic Brain Injury, a systematic approach to bowel management is recommended to prevent further health complications and maximize quality of life. With these conditions, and others, the product used for bowel care management must work quickly, effectively, and with little to no side effects.

The active ingredient found in Enemeez® mini-enemas is docusate sodium. The Enemeez® formulation functions as a stool softening hyper-osmotic laxative by drawing water into the bowel from surrounding body tissues. The docusate sodium acts as a softener by preparing the stool to readily mix with watery fluids. The increased mass of stool promotes a bowel evacuation by stimulating nerve endings in the bowel lining and initiating peristalsis. Not only does it soften and loosen the stool, but it initiates a normal replicated stimulus.

The Enemeez® mini-enema delivers 283mg of docusate sodium and functions as a stool softener hyper-osmotic laxative by drawing water into the bowel from surrounding body tissues, softening the stool and promoting a bowel movement. Enemeez® mini-enemas are used rectally and produce quick results, typically between 2-15 minutes, as opposed to hours or days for oral constipation medications.

Size: 55.94, 30 Count	Age Range: Ages 12 and Up	Active Ingredients: Docusate Sodium
---------------------------------	-------------------------------------	---

FAST: The fastest on the market for constipation relief; Works in 2 to 15 minutes	SAFE: Non-Irritating formulation is Safe, Fast and Effective	COMFORT: Flexible tip for ease of use at home	FOR RECTAL USE ONLY: place a few drops of the mini-enema tube liquid on Shaft prior to insertion	ACTIVE ING: docusate sodium acts as a softener preparing stool to readily mix with watery fluids
---	--	---	--	--

Safety Warnings:

For rectal use only. Drug Interaction Precaution: Do not take this product if you are presently taking mineral oil, unless directed by a doctor.

Specific Uses:

Adults and children 12 years of age and older (with adult supervision), one to three units daily. Children 6 to 12 years of age (with adult supervision), one unit daily.

Directions:

Twist off and remove tip. Lubricate tip prior to insertion. Place a few drops of the tube's liquid content on the shaft prior to insertion. Positioning: For best results lay on left side with knees bent. With steady pressure, gently insert the tube into the rectum. Squeeze to empty contents. Keep the tube squeezed until it is removed from the rectum.

Enemeez® Plus Mini Enema, 283mg Docusate Sodium and 20 mg Benzocaine Mini Enema

Enemeez® Plus Mini Enema, 283mg Docusate Sodium and 20 mg Benzocaine Mini Enema, Constipation Relief, 30 Count Jar

Constipation is the most common gastrointestinal complaint in primary, acute, and long-term care settings in the United States. An estimated 42 million individuals in the United States have bowel issues or constipation. And an estimated 1 million have incontinence. For people with conditions that can require a bowel care program, such as spinal cord injury, Spina Bifida, Multiple Sclerosis, and Traumatic Brain Injury, a systematic approach to bowel management is recommended to prevent further health complications and maximize quality of life. With these conditions, and others, the product used for bowel care management must work quickly, effectively, and with little to no side effects.

The active ingredient found in Enemeez® Plus mini-enemas is docusate sodium and include pain relieving benzocaine. The Enemeez® Plus formulation functions as a stool softening hyper-osmotic laxative by drawing water into the bowel from surrounding body tissues. The docusate sodium acts as a softener by preparing the stool to readily mix with watery fluids. The increased mass of stool promotes a bowel evacuation by stimulating nerve endings in the bowel lining and initiating peristalsis. Not only does it soften and loosen the stool, but it initiates a normal replicated stimulus.

The Enemeez® Plus mini-enema delivers 283mg of docusate sodium and 20mg of benzocaine and functions as a stool softener hyper-osmotic laxative by drawing water into the bowel from surrounding body tissues, softening the stool and promoting a bowel movement. Enemeez® Plus mini-enemas are used rectally and produce quick results, typically between 2-15 minutes, as opposed to hours or days for oral constipation medications.
